

Giardiasis Fact Sheet

What is Giardiasis?

Giardiasis is a disease caused by a microscopic parasite that causes diarrheal illness. The parasite gets into the intestines, and lays eggs, which are then passed in feces via a bowel movement.

What are the symptoms?

- Many loose, watery bowel movements that are yellow, frothy, and smell worse than usual
- Diarrhea alternating with constipation
- Gas
- Stomach cramps
- Upset stomach or nausea
- Dehydration

Symptoms usually appear 1-3 weeks after becoming infected. Symptoms may last between 2-6 weeks.

How is it spread?

People with the parasite who do not wash their hands after having a bowel movement or after changing the soiled diaper of an infected child can spread it to others. Drinking contaminated water, such as untreated water from lakes and streams, can also transmit it. Eating uncooked food that contains Giardia can lead to infection as well.

How is it treated?

If you have the disease, you will be given medicine to take. Take all of the medicine as prescribed, even if you start to feel better. If you or anyone in your family is diagnosed with this disease, ALL members of the family should be checked by your doctor for Giardia. It is also important to stay well hydrated, especially infants and pregnant women.

Adults with Giardiasis should:

- Not prepare food
- Wash hands for at least 20 seconds after using the toilet or changing soiled diapers
- Put disposable diapers in a plastic bag and throw out in a tightly closed garbage can
- Clean the bathroom after each use, including toilet flushing handle, water faucets and doorknobs, with one tablespoon bleach per one gallon of water (make a fresh solution every day).
- Avoid water (drinking or recreational) that may be contaminated
- Avoid eating food that may be contaminated

Children with Giardiasis should:

- Wash their hands after using the toilet.
- Stay away from other children until they are well.
- Wash toys that can be put in a child's mouth after each child's use- with one tablespoon bleach per one gallon of water (make a fresh solution every day).
- Avoid water that may be contaminated.
- Avoid eating food that may be contaminated.

How is it prevented?

Treatment and the above personal hygiene measures will help to stop the spread of Giardia to others.
